Observed and predicted species richness across trophic groups in the Congo Basin

Negative Binomial regression models | Observed richness, model predictions and Pearson residuals

A. Observed species richness

B. Predicted species richness

C. Pearson residuals

0 50 100 150 200 250 300 350

Species richness (number of species)

−2 −1 0 1 2

Pearson residual

Pearson residual = (observed − predicted) / √(predicted + α × predicted²). Positive values indicate underprediction; negative values indicate overprediction.
